LiveNX 23.1.1

RELEASE NOTES

Release Information

- Release Version: LiveNX v23.1.1
- Release Date - Apr 11, 2023
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

Server Version:	23.1.1-20230405-dc1a6c3
Web Version:	23.1.1-20230404-6845415+b5

Resolved Customer Issues

- LS-3378 - Fixed an issue where BFD data was missing when poll errors occurred
- LS-3353 - Fixed an issue where the LIVEACTION-PRODUCTS-MIB was failing snmpwalk

Enhancements

- TACACS/RADIUS users can once again log into the Engineering Console after selecting the appropriate authentication type

Bug Fixes

General

- Fixed an issue where the "migration required" message was incorrectly displayed on the Operations Dashboard login screen anytime the LiveNX server was offline
- Fixed an issue where spaces were removed in auto-complete suggestions

Dashboard

- Cisco SD-WAN dashboard widgets are now sorted by severity and then metrics rather than purely by metrics

Device Management

- Fixed an issue where the "site" link on the "my devices" tab was not taking users to the site management page

Known Issues

- TACACS/RADIUS user names must be unique to log into Engineering Console. If a local user exists with the same user name as a TACACS/RADIUS user, login will fail.
