LiveAction™

8.2.0 Release

Release Information

- Release Version: LiveNX v8.2.0
- Release Date: April 1st, 2019
- Release Designation: ED (Early Deployment)

Build Information

APPLICATION VERSION	
Server Version :	8.2.0-20190329-ac7780c
Web Version :	8.2.0-20190329-0e8d2dd+b230
OVA Version :	1.32.0

New Features and Enhancements

- Custom Applications Management ported to Operations Dashboard
  - Add/Edit/Delete custom applications
- Geo Topology
  - Internet/Unknown nodes will remain close to their associated node while zooming
  - Lines describing traffic/flow have been condensed into a smaller viewing area
  - Internet/Unknown sites can be toggled via the topology layer control
- Entity Pages
  - User can drill down to the report page by right-clicking table cells of flow based widgets
- Dashboard
  - Widgets will show their last state while waiting for live data
  - Maximum number of widgets that can be added to a dashboard changed to 9 from 12 (default dashboards with 12 can exceed this limit)

- Troubleshooting
  - Moved under "Settings" page
  - Logs, Heap dumps, Packet capture, CPU Profiling have all been consolidated to this menu
  - Troubleshooting workflows are now asynchronous, allowing the user to navigate away while the operate to generate the appropriate information occurs. This also allows for retention of the last exported data.
- System Management
  - Style has been completely revamped
- Reports
  - Custom report name's will be visible within the "Report List" during report template creation
  - Added IPv6 Support for the "Bidirectional Source/Destination Pair" report
  - Added finer granularity for sharing a report as a PDF and CSV
  - Report PDF's can have their result count limited to 10, 25, or all
  - Fixed issues and improved behavior of the AVC "Application Performance Over Time" report (formerly called the "Application Performance" report)
- Stories
  - Added new WAN Interface Utilization story
- Site Management
  - Site can now be tagged just like sties and devices. You can use the sites tags in flex search in reporting and any other existing searches based on tags
- DNS Resolution and Custom IP mappings
  - Can now see custom IP mapping and DNS information in the operations dashboard reports when this feature is enabled. This feature must still be configured through the engineering console.

Resolved Customer Issues

- LD-22973 - Server Error NullpointerException
- LD-22845 - PDF Report Data Split Between Pages
- LD-21179 - Investigate Device Gray
- LD-22886 - Not able to add Nexus 9K
- LD-23124 - dpiapplications.xml file corrupted
- LD-23125 - java.lang.IllegalArgumentException: value is null
- LD-23214 - Unable to read/purge influx files in OVA
- LD-23261 - #TS - Unable to enable MSP License
- LD-23308 - LDAP Poller Timer Error
- LD-23032 - A status alert was shown/affecting status even though it was purged

Known Issues

N/A
