

LiveNX 24.3.1

RELEASE NOTES

Release Information

- Release Version: LiveNX v24.3.1
- Release Date - Feb 25, 2025
- Release Designation - MD (Maintenance Deployment)

Build Information

Application Version

Server Version: 24.3.1-20250224-79234aa
Web Version: 24.3.1-20250223-fa06b07+b23

- **Java Version:** 17.0.7
- **Ubuntu Version:** 22.04

Enhancements

General

- Restricted ciphers for Grafana communication

LiveAdmin

- Added the ability to modify docker IP ranges to avoid conflicts

LiveAssist

- Added the ability to provide feedback to LiveAssist chats

Onboarding

- Improved Meraki device model resolution
- Improved CheckPoint device model resolution
- Improved F5 device model resolution

Bug Fixes

General

- Fixed an issue where users would be session timed-out even when actively using the system
- Fixed an issue where batch geocoding/reverse-geocoding was not working

Reporting

- Fixed an issue where FlowStore v2 time series reports would show gaps in the series

Topology

- The legend is now scrollable to ensure the layer can be changed even when there are many items being displayed in the legend

Stories

- Fixed an issue where the Flow Path Analysis story's status symbols were not clickable
- Fixed an issue where the Flow Path Analysis story's columns were not being colored based on status
- Fixed an issue where incorrect time ranges were being applied to the flow path analysis topology drill down

Customer Issues

- LS-3729 - Fixed an issue where devices with special characters in their serial could not be edited
- LS-3746 - Fixed an issue where the Site WAN interface bandwidth by application report could not be executed
- LS-3734 - Fixed an issue where the configuration could not be exported
- LS-3684 - Fixed an issue where exported time series CSV data would be incorrectly truncated
