

## Release Information

- Release Version: LiveNX v25.2.0
- Release Date:
  - Internal: Jul 2, 2025
  - GA: Jul 2, 2025
- Release Designation: ED (Early Deployment)

## Build Information

### Application Version

Server Version:	25.2.0-20250627-fd0d7d3
Web Version:	25.2.0-20250627-5495f54+b135

- Java Version: 21.0.5
- Ubuntu Version: 22.04

## New Features and Enhancements

### Major Capabilities

#### Alerting

- Alerts can now be batched into a single email
- Voice/Video Performance alerts now support dynamic thresholds

#### Dashboards

- Shared dashboard ownership can now be transferred

#### Device Monitoring

- A new Device Monitoring module has been added to support additional vendors and metrics

#### Reporting

- Additional filter support added for FlowStore v2 reports

#### LiveAssist

- Device inventory can now be sent up to LiveAssist. Once sent, users can ask questions about devices within LiveNX.
- A self registration button has been added for LiveAssist
- Root cause assist messages will now provide more info on the current status

---

## Cloud Monitoring

- VNET flow logs are now supported
- Ability to import VAN and VHUBs from Azure

## Minor Capabilities

### Alerting

- The baseline value used for a dynamic thresholds is now shown in alerts
- TLS support has been added for Syslog
- Disabling an alert threshold will resolve all associated alerts
- Moving a device between nodes will resolve alerts associated with that device
- The root cause assist filter has been improved to allow filtering of pending or completed root cause assists

### Onboarding

- Added the ability to specify the time of day devices should be refreshed

### Reporting

- A "previous month" time range option has been added to the pre-populated time range options

## Bug Fixes

- Fixed an issue where the Prometheus dashboards in Grafana required the user to re-authenticate
- Fixed an issue where LiveNX-SM was failing to read the flow due to too many open files
- Fixed an issue where clickhouse data was not getting purged automatically on low disk space
- Fixed an issue where RCA process stuck in 'In Progress' due to missing Level two information
- Fixed an issue where traditional license needs to be reactivated after LiveNX VM reboot

## Resolved Customer Issues

- LS-3772- Fixed an issue where Azure authentication for Azure GovCloud was incorrect
- PM-11122- Fixed an issue where drilling down on an IP address for a clickhouse report was failing

## API Update

URI	Method	Summary
/alerting/email/bulk/configuration	PUT	<p>Added two parameters in the request object as below.</p> <ul style="list-style-type: none"><li>• <b>batchAlertEmailSendEnabled</b>: Boolean field to indicate whether to send batch alerts in email or not</li><li>• <b>maxSendDelayMinutes</b>: Integer value indicates that how much time to delay the email to accumulate the alerts in queue, after which all accumulated alerts send via email.</li></ul>
