

## LiveNX 22.2.1 Release Notes

### Release Information

- Release Version: LiveNX v22.2.1
- Release Date - May 20, 2022
- Release Designation - MD (Maintenance Deployment)

### Build Information

#### Application Version

Server Version:	22.2.1-20220519-1d36588
Web Version:	22.2.1-20220518-aba3c69+b11

### Resolved Customer Issues

- LS-3146 - Incorrect spelling of report names on site entity page
- LS-3140 - BGP alerts are not automatically resolving
- LS-3135 - Unable to put devices into maintenance mode

### Bug Fixes

- Improved performance at scale by reducing the size of operational info sent between nodes
- Fixed an issue where web logs were excluded from log export
- Fixed an issue where devices could not be set to maintenance mode
- Fixed an issue where BGP peer IP alerts would not automatically resolve
- Fixed an issue where day 2 Cisco SD-WAN device management suggestions were not being returned in the correct order
- Corrected spelling of report headers on Site entity page
- Updated parsing of "flow end reason" flow field to show "N/A" when the value is "-1"
- Fixed an issue where the loading spinner was not visible while updating interfaces

### API Update

URI	Method	Summary
/alerting/identifiers	GET	The <code>operator</code> field added in 22.2.0 is now optional. If <code>operator</code> is not supplied, the default operator will be used. This change ensures backwards compatibility.
/alerting/identifiers/{id}	PUT
